

OPTION 412

AE SERIES

OPTION 412 PROVIDES AUTOMATIC RESET AND RESTART FUNCTIONS

This option is available for all AE Series Multi-Function Clock/Timers and Elapsed Timers with two, three, four, five or six digit configurations.

When the elapsed timer reaches its preset value on count up, or zero on count down, the timer will reset and start over.

On AE Series models with built-in controls, the preset values and the Start and Reset functions can be controlled locally.

On models that do not have the built-in controls, the preset values must be set at the factory. Also, a single dry contact closure is required to start the elapsed timer at the desired instant.

Built-in controls are not available on two, three and five digits models.

Refer to the specific product brochures and manuals for more details.
