1", 2.3", 4", 8", and 12" High Digits.

AE16B

AE2412B

Low Voltage, 12 VAC powered - Other power is optional.

Customized for your application.. Give us your specifications..

Bezel Mount versions are available for many of the AE Series Large Displays. These versions do not have enclosures, and therefore are intended for mounting in an enclosure or some other equipment supplied by the user. All AE Series functions are available including, Multi-Function Clock/Timers, Elapsed Timers, Counters, 4-20 mA Process Indicators, RS232 Input Displays, BCD Input Displays, and other special functions. Refer to the specific brochures for more details.

Typical rear view of an AE43SB

Bezel Mount versions are simply circuit board assemblies mounted to a piece of plexiglas. The circuit boards are exposed, therefore it is up to the system designer to make sure all wiring and components are properly enclosed to avoid hazards from electrical shock and to protect the assembly.

Most Bezel Mount versions are powered by 12 VAC. Other power options are available.
