phone: 318-797-7508

Select the Location

The CC24E can be wall mounted in the same manner as you would hang a picture or another type of clock. For best results, secure a #8 or larger pan head screw to the wall. The screw should extend about 1/2" to 3/4" from the wall. Hang the CC24E on the secured screw.

For shelf mount set the CC24E on a secure flat surface.

Connect the Power

A power module is provided. Insert the power plug into the power jack extending from the back of the unit. Plug the power module into your standard AC receptacle. Time will be displayed 12:00.

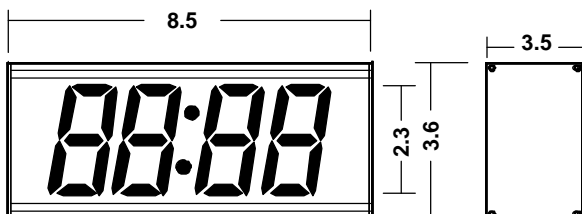

Set the Time

Press the HOURS push-button until the desired hours are shown. An AM/PM indicator is provided in the lower right hand corner. Press the MINUTES push-button until the desired minutes are shown. To synchronize with another clock, set the matching minute at the instant the reference clock updates its minute.

SPECIFICATIONS:

- Power: 12 VAC, 6 VA Max, 60 Hz. A power module is provided
- Format: 12 Hour Format. AM/ PM Indicator (lower right hand corner of display)
