

# RF WIRELESS CONTROL

OPTION 273

## OPTION 273 - RF WIRELESS CONTROL FOR AE SERIES LARGE DISPLAYS

Option 273 can be added to any AE Series Multi-Function Clock/Timer and to many other AE Series Large Displays to provide wireless control of the Start/Stop, Count and Reset functions.

There are two parts to this system. One is the Option 273 that adds the two-channel receiver to the display and the other is the AERFTX2 handheld remote control.

The two-channel receiver is installed in the AE Series Display for controlling one or two of the display's inputs. For example on Multi-Function Clock/Timers, or dedicated Up or Down Counting Elapsed Timers, it would be wired into the Start/Stop and Reset inputs. On an Event Counter it would be wired to the Count and Reset inputs.

One or more AERFTX2 Handheld Remote Controls are required. Also, custom fixed station RF Controls are available.

AERFTX2

Clock/Timer Built-In Controls

When this Option is added to a Multi-Function Clock/Timer, the RF Wireless Control can be disabled by a switch setting on the built-in controls of the Clock/Timer Display.

Multiple Clock/Timers, Counters or Elapsed Timers can be controlled from a single AERFTX2.

For information on the AE Series Clock/Timers and Counters refer to the specific product brochures. For details on operation, refer to the specific product manuals.
